

Horsepen Bird Atlas

A total of 106 different bird species have been observed in Countryside's Horsepen nature preserve during the Loudoun Wildlife Conservancy's (LWC's) 5-year bird atlas program, which ends on December 31 this year. Of those species, 68 were observed in Horsepen during their breeding season, earning it the designation of one of the richest bird breeding areas in the county. Countryside's Board of Directors granted permission for Horsepen to be monitored by a local naturalist for the bird atlas, and his efforts have been supplemented by several Countryside residents. A complete listing of the results to date follows, with confirmed breeders indicated by CO, probable breeders by a PR, and possible breeders by a PO. A detailed explanation of the codes used and other information about the atlas program may be found on LWC's website at loudounwildlife.org/Bird Atlas.htm. Take binoculars the next time you go for a walk in Horsepen and look for a bird consistently returning to the same spot, which could indicate nest building or the feeding of young. You may even discover a previously unreported species! Of course, you will observe from afar and not disturb the bird family.

****see below for a detailed list of the different bird species observed in CountrySide****

Draft Results for Horse Pen (private)

All results DRAFT until final review / publication.

SUMMARY:

68 total species: 33 CO, 15 PR, 20 PO, (plus 38 OB)
